Response to Reviewer 1

This sample text was generated by Google Gemini. We would like to thank Reviewer 1 for their rigorous and constructive feedback on our manuscript, “The History of Animagus: From Medieval Transfiguration to Modern Registration.” We have addressed each point as detailed below.

Comment #1

The authors state that the Animagus Registry is an exhaustive record of all practitioners in Great Britain. However, historical evidence from the 1970s suggests the existence of several unregistered Animagi at Hogwarts. The manuscript should acknowledge these non-compliant cases to maintain historical accuracy.

Thank you for this crucial observation. We agree that the distinction between registered and unregistered Animagi is vital for a comprehensive history. We have updated the introduction and the “Ministry Oversight” section to include the notable cases of the ‘Marauders’ cohort.

Page 3, Line 45	The Ministry of Magic maintains a complete and infallible registry of all Animagi, ensuring every transformation is monitored for public safety.	While the Ministry of Magic maintains an official registry, historical records—including the ‘Marauders’ incident—reveal that unregistered transformations have occurred , often bypassing Ministry oversight for years.

Comment #2

The description of the transformation process is somewhat vague. Specifically, the requirement to keep a Mandrake leaf in one’s mouth for an entire month is a defining (and grueling) feature of the process and deserves explicit mention.

We appreciate this suggestion. We have added a new subsection, “The Mandrake Protocol,” providing a detailed account of the physiological and psychological challenges of the transformation process.

Page 7, Section 2.3	The transformation involves complex potion-making and high-level incantations over an extended period.	The transformation begins with the Mandrake Protocol , requiring the practitioner to keep a single Mandrake leaf in their mouth from one full moon to the next, followed by the consumption of an Animagus Potion during a lightning storm.
Page 12, Conclusion	In conclusion, the history of Animagus shows a trend toward stricter regulation.	In conclusion, the history of Animagus reflects a constant tension between Ministry regulation and the inherent secrecy of those who achieve this rare magical feat.

Response to Reviewer 2

Reviewer 2 raised interesting points regarding the psychological impact of long-term animal form maintenance.

Comment #1

The case of Peter Pettigrew (who remained in rat form for twelve years) provides a unique data point on the ‘human-animal cognitive overlap.’ The authors should discuss whether prolonged transformation leads to a permanent loss of human identity.

This is a fascinating point that aligns with our secondary research interest in cognitive neuroscience. We have added a paragraph discussing the “Pettigrew Effect,” where long-term transformation may result in a significant shift toward animalistic behavioral patterns.

Location	Before	After
Page 15, Discussion	Pettigrew’s case is primarily seen as a failure of Ministry detection.	Pettigrew’s twelve-year residence as a common garden rat suggests a potential ‘ identity erosion ’, where human cognitive structures are increasingly dominated by the instincts of the animal form.

The legal section would benefit from a discussion on how the Ministry attempted to develop detection spells to identify unregistered Animagi, specifically focusing on the failure of the ‘Homenum Revelio’ spell in certain cases.

We agree that the technical limitations of Ministry detection are central to the legal history. We have added a new subsection titled “Detection and Countermeasures” to address this.

Page 11, Section 4.1	4.1 Detection and Countermeasures. We have added a new paragraph describing the Ministry’s failed attempts to use a modified <i>Homenum Revelio</i> to detect Animagi. The evidence suggests that the spell often fails to distinguish between a natural animal and a magically transformed human unless the caster is specifically searching for an Animagus signature.
